GoKnow, Inc. Partners with the American Education Corporation to Integrate Artemis™ with the *A+nyWhere Learning System*®

February 2, 2003 Ann Arbor, MI — GoKnow, Inc., a K-12 curriculum and technology firm founded by leading educators and researchers from the University of Michigan, announces a partnership with American Education Corporation of Oklahoma City, to provide students with an integration of the Artemis research engine and AEC science courses.

Artemis a unique research tool with support structures to help students stay on task and improve research skills. Unlike typical search engines, Artemis supports students' inquiry-based learning with a collection of pre-selected educational sites on the web that are continuously monitored and updated by GoKnow librarians. Students search and find optimally sized sets of materials that are appropriate to subject and reading level. "Artemis has grade-appropriate research materials for science and social studies, and a place for my students to interact...in a safe, structure web-based environment" according to J Reynolds 9th grade science teacher at Detroit Public Schools.

Artemis voted "by far the most popular library choice..." by eSchool News online has a teacher tool that allows the teachers to monitor students' progress so they can adjust their teaching accordingly. Artemis helps students focus their energies and develop a competence in seeking and evaluating and using relevant information. "Artemis is a tremendous support to students when they research...and they are able to save URL's into their own folders which they access at home." A. Novak 7th and 8th grade teacher Ann Arbor, MI.

AEC will both integrate the Artemis research engine to present pre-selected web sites in its mid-level Science content and develop specific research modules utilizing Artemis research tools.

“We are extremely excited about working with AEC on this endeavor and look forward to many other innovative projects in the future. AEC’s philosophy of integrating technology with curriculum is a perfect match for GoKnow.” Deb DeSousa, VP of Business Development, GoKnow.

About GoKnow

GoKnow is a system for learning designed to support teachers and administrators with professional development, curriculum and software applications that help students with diverse learning styles to succeed in school. Research conducted by the University of Michigan demonstrates that students are better able to achieve their learning goals through the use of this system. These tools and approach are fundamentally changing the way students interact with the curriculum, teachers and each other.

At the heart of the GoKnow system is a suite of software developed over 10 years with more than 20 million dollars in research grants. These are first generation educational applications that build on leading edge knowledge of information and educational systems.

About AEC

AEC’s *A+nyWhere Learning System*, released in early 2001, provides a state-of-the-art, standards-based management system to support the Company’s extensive curriculum content and skills assessment tools in a solution designed to run over networks and the Internet. This family of educational software products provides an integrated suite of grade level K-12 software for Reading, Mathematics, Language Arts, Science, Writing, History, Government, Economics and Geography publications. AEC also offers companion academic skill assessment products to provide educators with the means to more effectively target the use of the Company’s curriculum content and to manage accountability. Spanish language versions are available for Mathematics and Language Arts for grade levels 1-9. The *A+LS* comprehensive family of educational software is now in use in over 10,000 schools, centers of adult literacy and correctional institutions.
